## **EXPERIENCE**

## Microsoft | Software Engineering Intern, Business AI | Jan - Apr 2020

- Reduced pipeline training time by 40% and memory footprint by 20% across thousands of prediction scenarios via dimensionality reduction in Python and Spark
- Enhanced telemetry with rich data profiling for inferring applicability of dimensionality reduction techniques
- Enabled users to self-author and run custom pipelines by leveraging MIT's open-source MLBlocks framework

# Broadway Technology | Software Engineering Intern | May - Aug 2019

- Developed support for new class of bonds within Broadway's trade querying and subscription system using C++ and Python
- Revamped trade times to microsecond precision by overhauling code to the latest FIX trading protocol
- Reduced code complexity by refactoring Broadway's trading platform to use generic libraries / variadic templates

#### SnapTravel | Software Engineering Intern | Sept - Dec 2018

- Profited an estimated sales impact of \$5M USD in 2019 by developing a loyalty rewards Flask microservice for business travelers
- Enabled production launch by creating a dashboard to easily manage the lifecycle of loyalty credits in Django
- Saved team 50+ hours / week by implementing a PDF library in Python to autogenerate and upload invoices

#### Novus Health | Software Engineering Intern | Jan – Apr 2018

- Decreased turnaround for crafting questionnaires from hours to minutes by implementing a drag-and-drop builder using React / Redux
- Reduced entry update times by 40% by composing and automating data import tools in PHP and SQL
- Exposed critical data for third-party requests by creating 10+ public REST APIs

#### Genesys | Software Engineering Intern | May – Aug 2017

- Served hundreds of calls daily by building a media control suite for audio recording and playback in C++
- Boosted sound quality by up to 50% by extending support for the next-generation Opus audio codec
- Cut development wait times for pushed builds by 4x by implementing a build status report system in Python

#### **PROJECTS**

#### 

- Developed a multiplayer aerial combat game in C# with Unity
- Integrated server networking logic with matchmaking system for hosting 20+ concurrent users

## Student Management System &

- Implemented a database to manage 1000+ student records using LAMP Stack
- Designed robust input sanitation and validation using error handlers and regular expressions in PHP

# **SKILLS**

Languages: Python, Java, JavaScript (ES6), C++, C#, Go, SQL, R, PHP, Bash

React, Redux, Flask, Spark, Node.js, Laravel, Django, Android, Docker, Redis, Git Frameworks/Tools:

## **EDUCATION**

# University of Waterloo | Bachelor of Computer Science | Sept 2016 - Apr 2021

Coursework on Operating Systems, Data Structures & Algorithms, Concurrency, Networks, Artificial Intelligence
